

## LOGI miniBot – Instruments – in German

**Product Code: BOT1208-DE**

**An educational tool that supports foreign language learning through exploring music and instruments.**

The set allows children to recognize, name, and pronounce the names of instruments and sound-related terms in a foreign language. Thanks to the combination of illustrations, sounds, and words, learning vocabulary becomes natural and engaging.

Children learn to match sounds to illustrations of instruments, and the ability to listen to melodies and independently check answers enhances independence, confidence, and motivation to learn the language. The integration of images, sounds, and words activates various senses, which increases the effectiveness of vocabulary acquisition.

The set works perfectly during language lessons, both individual and group sessions, as well as in music classes or in afterschool programs. The simple mechanism allows play to begin without preparation, and repeating and correcting answers supports reinforcing words in a foreign language. It's an attractive and practical educational tool that uses the world of music as a pretext for learning a foreign language from an early age.

**To conduct the game, the LOGI miniBot is required (sold separately – product code: BOT2025).**

### **Set contents:**

- Colorful A3 educational board
- 26 cards with illustrations of instruments and their corresponding names
- Instruction guide with two variants

### **Users:**
