

LOGI miniBot– colours (in French)

Reference: BOT1209-FR

An engaging educational resource that supports foreign language learning through the discovery of colours.

The set consists of cards depicting colourful objects along with their names in a foreign language. Children naturally learn to recognize, name, and correctly pronounce colours in another language while expanding their thematic vocabulary.

The cards support the development of speech, visual memory, and focus. With the help of clear illustrations, children easily associate foreign-language colour names with familiar everyday objects. The inclusion of white and black cards allows teachers to introduce the concept of shades while expanding vocabulary related to colour description.

The activity develops concentration, observation, and logical thinking skills. Practical tasks – such as finding objects of the learned colours in the classroom or environment – further engage children and encourage them to use the foreign language in real-life contexts.

This set is an ideal educational aid for preschool and early school teachers, suitable for both individual and group activities. It makes foreign language learning natural, enjoyable, and multisensory.

To play the game, a LOGI miniBot is required (sold separately – product code: BOT2025).

Set contents:

- Colourful A3 educational board
- 26 cards with illustrations of objects and their corresponding names
- Instruction manual with two activity versions

Number of players: 1–6 children
