

LOGI miniBot – Shapes in French

Product Code: BOT1225-FR

A practical educational tool supporting foreign language learning through discovering and naming shapes.

In an engaging and fun way, the game develops language skills – children learn to recognize, name, and correctly pronounce basic shapes in a foreign language. By working with the cards, they learn and reinforce shape-related vocabulary such as: circle, square, triangle, rectangle, and pentagon, and they also learn to relate them to objects from everyday life.

The set is based on a self-checking method, which supports motivation, builds self-confidence, and develops self-monitoring skills. Double-sided cards (shape/object) allow the difficulty to be gradually increased, introducing children to increasingly complex language tasks.

A teacher can easily use the game for individual and group work – especially during language classes, general development activities, or as part of pedagogical therapy. Thanks to the illustrations, children learn to associate foreign-language words with specific situations and objects, which supports long-term retention. The game develops speech, enriches thematic vocabulary in a foreign language, and engages different senses – sight, hearing, and touch – making learning natural, effective, and enjoyable.

**To conduct the game, the LOGI miniBot is required
(sold separately – product code: BOT2025).**

Set contents

- 26 cards with illustrations
- Instruction guide with two variants

Users:

- 1-6 children
