

LOGI miniBot – Solids in German

Product Code: BOT1226-DE

The cards introduce children to the world of geometry by connecting shapes with everyday objects.

With this set, children develop the ability to distinguish geometric solids and learn to associate geometric forms with common items. Each card features an illustration of an object, and the reverse side shows the solid that corresponds to it. The set supports language development by helping children learn mathematical terminology in foreign languages. The cards also build observation skills, the ability to classify and organize objects, and support learning the names of geometric solids.

The LOGI miniBot allows children to check their answers independently, which increases motivation and gives a sense of success. The set works perfectly in preschools and home education, introducing mathematical concepts in a friendly and engaging way.

To play the game, the LOGI miniBot is required (sold separately – product code: BOT2023).

Set Contents:

- 26 double-sided cards
- Instruction manual

Users:

- 1-6 children
