

## LOGI miniBot – Instruments in English

**Product code: BOT1208-EN**

**A developmental educational resource that supports foreign language learning through discovering music and musical instruments.**

The set enables children to recognise, name and correctly pronounce the names of instruments as well as sound-related concepts in a foreign language. By combining illustrations, sounds and words, vocabulary learning becomes natural and engaging.

Children learn to match sounds with illustrations of instruments, while the ability to listen to melodies and independently check their answers strengthens autonomy, self-confidence and motivation to learn a language. Connecting image, sound and word activates multiple senses, increasing the effectiveness of acquiring new vocabulary.

The set works perfectly during language classes, both individual and group activities, as well as during music lessons or in after-school care. A simple mechanism allows children to start playing without preparation, and repeating and correcting answers supports vocabulary retention in a foreign language. It is an attractive and practical teaching aid that makes the world of music a natural gateway to foreign language learning from an early age.

**To play the game, a LOGI miniBot is required (sold separately – product code: BOT2025).**

### **Contents of each set:**

- Colourful A3 educational board
- 26 cards with illustrations of instruments and their corresponding names
- Instructions for use in two variants

### **Users:**

- 1-6 children
- From 4 years of age
