

## LOGI miniBot – My Day

**Product code:** BOT1231-PL

### **Learning planning, time orientation, and storytelling.**

The game helps children understand the structure of the day and the sequence of daily activities. By following the stages—from waking up in the morning, through daytime activities, to evening rest—children learn to organize events in a logical order, supporting the development of organization, planning, and predicting next steps.

During play, children practice time orientation, expand their vocabulary, and learn to tell stories in a coherent and organized manner. The interactive support from **LOGI miniBot** makes discovering daily routines an engaging adventure in which the child actively participates. The included clock pointers make it easy to introduce the concept of time, further developing the ability to tell time.

Arranging activity cards into a timeline fosters sequential thinking and the ability to connect facts. Children learn that every activity has its place during the day, and good organization promotes a sense of security and confidence. Colorful illustrations make the game visually appealing and encourage repeated play, reinforcing learned skills in practice.

**To play the game, LOGI miniBot is required** (sold separately – product code: **BOT2025**).

### **Set contents:**

- **Colorful A3 board**
